

Get Smart...

Build off site

Many water utilities are already making use of build off site as an alternative to bespoke, expensive and time-consuming onsite construction methods to deliver savings in capital and operating costs.

Smart Schedules

Build off site enables us to minimise disruption from on-site activity. Standard designed modules manufactured in our factory can be installed quickly, will more reliably meet quality standards and specifications and are ready when required by the site construction team.

Smart People

Our smart build off site solutions draw on the deep experience of our people in project management and modular construction to ensure your project is delivered on time and on budget.
