

The packaged alternative to tankering

Copa® SAF (Submerged Aerated Filter)

- **Low environmental impact**
- **Continuous treatment**

- Peak loading
- Refurbishment of existing bio-filters
- Supporting failing works
- Nitrification

For the past 25 years Copa® SAF's have provided the industry with a reliable and robust method of treating wastewater as a permanent or temporary solution.

Our maintained fleet of hire SAF's provide a rapid solution where works may be overloaded, under-performing or about to undergo refurbishment.

Single or multiple SAF units can be hired to achieve the desired treatment performance together with the option to hire settlement tanks as a single package from one source - Jacopa.

The Copa® SAF can be relied upon to deliver, and continue to deliver with the minimum of operator attention.

Installation Requirements

- Access to works
- 10 x 2.5mtr flat level base per SAF
- SAF base to support operating weight ~48t.
- Constant or batch flow
- Power supply (400/3ph/63Amp)
- Discharge point for treated water
- SAF sludge reception

*Allowing you to concentrate
on your programme of works*
