CLEARLY WASTEWATER

**Thursday 3rd May**  
Telford International Centre

 **Stand F9/10**  
**Pump Centre**

## RAKING IN RESILIENCE

The 2018 conference theme is, 'Resilience of Pumps and Pumping Systems' and Jacopa's Mick Burton will be presenting an unmissable Breakout session entitled 'Raking in Resilience' which will take place at midday in room 4 of the Beckbury Suite.

Achieving operational resilience is a top water industry priority from Government and Ofwat for PR19. Mick will present the case for innovation through collaboration to build operational resilience at the outset, protecting pumps and pumping systems at inlet works through the deployment of smart up-front trash rake technology.

## THREADING THE NEEDLE

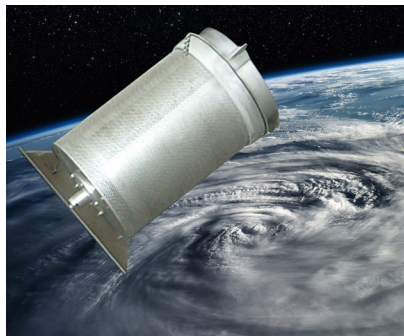

The Copa® Raked Bar Screen can pass through a remarkably small - 600mm wide manhole for below ground installations. Ideally suited to both new and existing Combined Sewer Overflow (CSO) chambers where high frequency spills can be expected, its modular design makes it ideal for retro-fit installations.

## THERE'S A CYCLONE ON OUR STAND

The Copa® Cyclone is a water-powered, self cleaning storm screen for combined sewer overflow (CSO) 6mm screening. The Copa Cyclone's unique design eliminates the need for an external power supply and mechanical cleaning of the screen's surface.

Ideal for storm tank discharges, pumping station overflows and storm over-flow chambers these robust, maintenance free units meet regulatory requirements and are suitable for retrofit applications.

## WE'RE TAKING THE WRAPS OFF

It's time to take the wraps off our newest exciting product for the wastewater industry. Come to the stand, or visit [www.jacopa.com](http://www.jacopa.com) on Thursday 3rd May to discover our breaking news.
